

1. Power amplifier up and push Channel A jog wheel in for a few seconds as indicated in the image.

2. Once the amplifier has booted up it will indicate the WiFi mode ON.

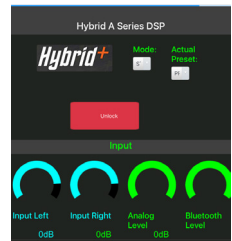

3. On your device go to WiFi settings and look for a network with the name HYB_ followed by Alpha Numeric digits (unique to each amplifier) and connect to your device using the Password: 12345678

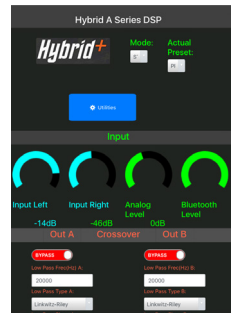

4. Go to the browser on your device type in the IP Address: 192.168.4.1

Your browser will show the screen on the right.

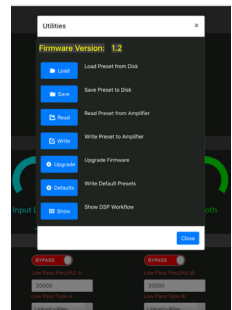

Click on Unlock and type in: 12345678

5. After you have logged in, the screen on the right will appear on your browser.

6. Set up the DSP up as per normal and be sure to save the pre-set by clicking on Utilities and Write Preset to Amplifier.

NOTE: The amplifier has a built in Bluetooth player, but can only be used when the amplifier is not in WiFi mode. In order to connect to the Bluetooth player, search for BT_HYB_ followed by Alpha Numeric digits (unique to each amplifier) in Bluetooth settings on your device and connect to the amplifier, no password needed.
